

Extend your situational awareness to better protect places

Add-on package for CommandCentral Aware

The public wants to be an active participant in keeping their community safe. Many businesses recognize that sharing information about their residence or facility could make a difference during an emergency. The challenge for public safety agencies today is setting up the right technology that allows businesses to take a proactive, protective approach to safety for their location – on their terms – to support a more informed response.

Protected Places

The Protected Places add-on package enables your community partners to share emergency response information, giving your command center enhanced real-time visibility during unfolding incidents.

→ Access community partner information

Community partners create a profile to share critical details about their Protected Place, including emergency contacts, floor plans and security camera information. Access this information in real time from your command center.

→ Register community partner cameras

Enable community partners to share the exact location and details of their security cameras. Map registered cameras in CommandCentral Aware alongside the location and status of radios, 9-1-1 calls, incidents and other devices and events. View registered camera ownership information in CommandCentral Aware to quickly locate and request video footage from camera owners near an incident.

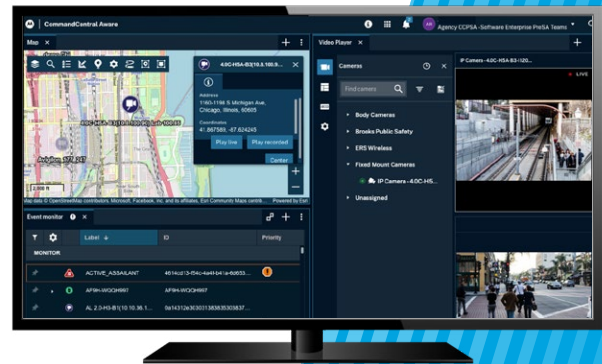

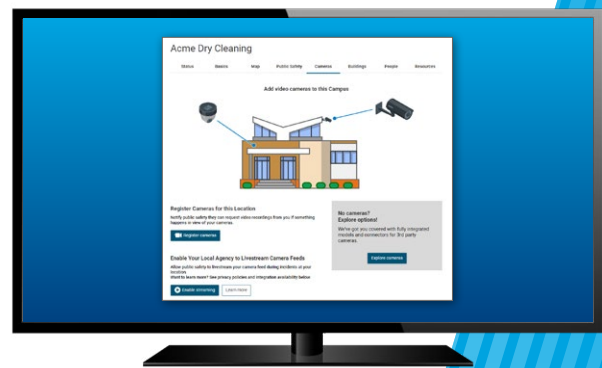

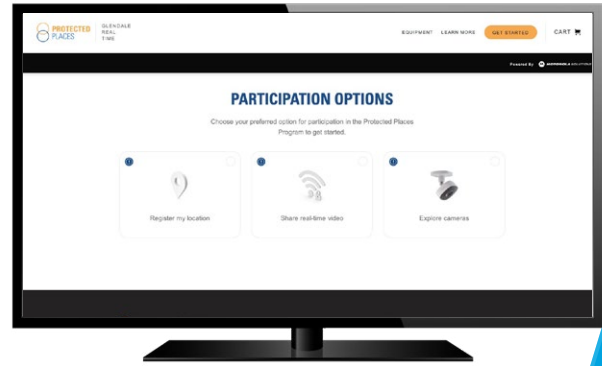

→ Connect community partner cameras

Enhance your real-time visibility during unfolding incidents by livestreaming community partner cameras. Partners themselves can connect IP cameras¹ utilizing an edge appliance to livestream up to 30 cameras on a network. Partners can also receive detailed instructions for connecting an existing Avigilon Unity or Alta video management system (VMS), or explore Avigilon security cameras pre-configured to livestream. Community partners can manage and troubleshoot camera connections and choose which cameras (e.g., exterior only) to enable livestreaming.

¹ Cameras connected through an edge appliance must support ONVIF Profile S for automatic discovery and provisioning in CommandCentral Aware

Key features

- The online experience is hosted by Motorola Solutions with no web hosting requirements from your agency
- Communicate the value of your program in order to grow your community's Protected Places roster
- Since no two communities are alike, the Protected Places online portal's color and imagery can be customized for a personalized look and feel for your community
- Partners agree to terms and conditions or your agency's Memorandum of Understanding (MOU) to participate in the program

Protected Places = safer spaces

Extend your situational awareness with the Protected Places add-on package for CommandCentral Aware. Protected Places mean safer spaces, for everyone.
