

Command Center Developer Program

Connect to our comprehensive portfolio of command center solutions

At Motorola Solutions, we build and connect technologies that make it safer everywhere. Our comprehensive portfolio of command center solutions are used across public safety and enterprise workflows. In fact, over half of the 911 centers in the U.S. use our technology.

Our customers rely on complementary providers to design, develop and deploy solutions connected to our command center portfolio. Together, we enhance data sharing and data redundancy as well as collaboration for public safety and enterprise organizations.

That's why we offer the Command Center Developer Program. This program provides on-premises and cloud-native APIs for the developer community to optimize and enhance public safety and enterprise workflows. Basic membership in the program is available at no cost and includes access to the developer portal. Advanced membership encompasses additional developer relations benefits including enhanced technical services and go-to-market support.

At Motorola Solutions, we're solving for safer. And we'd love for you to join us.

Partner Benefits by Tier

→ Developer:

- Developer portal access
- Remote test environment **(5 hour block(s) for a fee)**

→ Integrator:

All developer benefits, plus:

- Remote test environment **(10 total hours included)**
- Community and private issue support
- Product news and updates

→ Solution provider:

All integrator benefits, plus:

- Remote test environment **(60 total hours included)**
- Partner directory listing

Command Center Developer Program APIs

Emergency Call Handling

VESTA® 9-1-1

VESTA 9-1-1 helps Public Safety Answering Points (PSAP) take the crucial first step toward integrated, multimedia communications. As public safety communications continue to evolve, VESTA APIs are enabling different 9-1-1 data types to flow to other essential PSAP applications:

- **i3 Logging Events:** Subscribe your application to both legacy and Next Gen i3 data that is captured by VESTA 9-1-1
- **Call Detail Records:** Subscribe your application to Call Detail Record data that is captured by VESTA 9-1-1

Computer-Aided Dispatch (CAD), Records Management Systems (RMS) and Jail Suites

We offer two software suites for CAD, Mobile, RMS and Jail, called Flex and PremierOne. Flex is most often used by medium and small agencies who appreciate the ability to build a system specifically for their needs. Leveraging more than 60 fully-integrated modules covering all aspects of the CAD-Mobile-Records-Jail workflow, agencies can benefit from Flex's off-the-shelf pricing and flexible configurations.

The customization possible with the PremierOne CAD-Mobile-Records suite makes it the system of choice for very large public safety agencies. Designed to excel in the most demanding operational environments, PremierOne is resilient, scalable, feature-rich and secure.

Flex DataExchange

The tightly integrated Flex dispatch, records management and jail management applications provide access to comprehensive and accurate data to law enforcement professionals in the moments that matter.

The Flex DataExchange API helps streamline customer workflows by enabling you to:

- Extract data from on-premises Computer-Aided Dispatch (CAD), Records Management System (RMS) or Jail applications for use in a complementary application
- Publish data from an application to a Flex database
- Use Motorola Solutions API resources to customize queries, add images and other file types to an extraction, and explore new data types to include in an interface
- Leverage an optional, cloud-based test environment to optimize development

PremierOne™ Mobile

PremierOne Mobile is an advanced mobile communications solution for law, fire and emergency response units featuring dispatch integration, incident and unit management, state and federal database queries, messaging and mapping. The client application runs on Windows, in-vehicle laptops and tablet devices.

The PremierOne Mobile Software Developer Kit (SDK) enables other essential applications to:

- Consume query response and/or CAD Incident data from the PremierOne Mobile Client
- Subscribe to real-time mobile data access for reporting needs

CommandCentral command center software

The CommandCentral portfolio from Motorola Solutions offers cloud-native standalone software solutions as well as a number of value-added cloud features to enhance on-premises solutions like Flex and PremierOne.

Mobile Device Data Gateway

The Mobile Device Data Gateway API for unit, location and video data enables third party applications to provide mobile device location, unit information and video streaming into cloud-native software applications including CommandCentral Aware, CommandCentral CAD and other solutions.

- Publish real-time location and unit data
- Enable video streaming into applications that can ingest video

Event Data Consumption

The Event Data Consumption API enables third party applications to provide real-time event data that triggers alerts into cloud-native software applications including CommandCentral Aware, CommandCentral CAD and other solutions.

- Customize the look and feel of alerts triggered by event data
- Publish live updates to alerts
