VB SMARTCONTROL
MAXIMISE YOUR EFFICIENCY IN THE FIELD

RESPOND. RECORD. REVIEW.

Minimise the admin that's waiting for you at the station.

Use the Motorola Solutions VB SmartControl app, available on both Android and iOS, to securely review and categorise VB400 footage from the moment it's been captured. And with other key functionality, such as a summary of remaining recording capacity, you can make the most of your VB400's superior evidential footage and battery life.

RECORD AND REVIEW IMMEDIATELY

Streamline your evidential workflows. Play back high-quality video as soon as you've finished recording it, and use VideoManager's powerful custom fields to add crucial metadata.

You can now review your footage seconds after your VB400 stops recording. It's easier than ever to focus on the videos that matter most with our intuitive playback functionality.

Leverage VideoManager's powerful and flexible media fields - including free text and dropdowns - to categorise footage with the information most relevant to your organisation while you're still in the field. VideoManager can also use these media fields to create an incident for a video as soon as it's been downloaded - so it's one less thing to think about once you're back at the station.
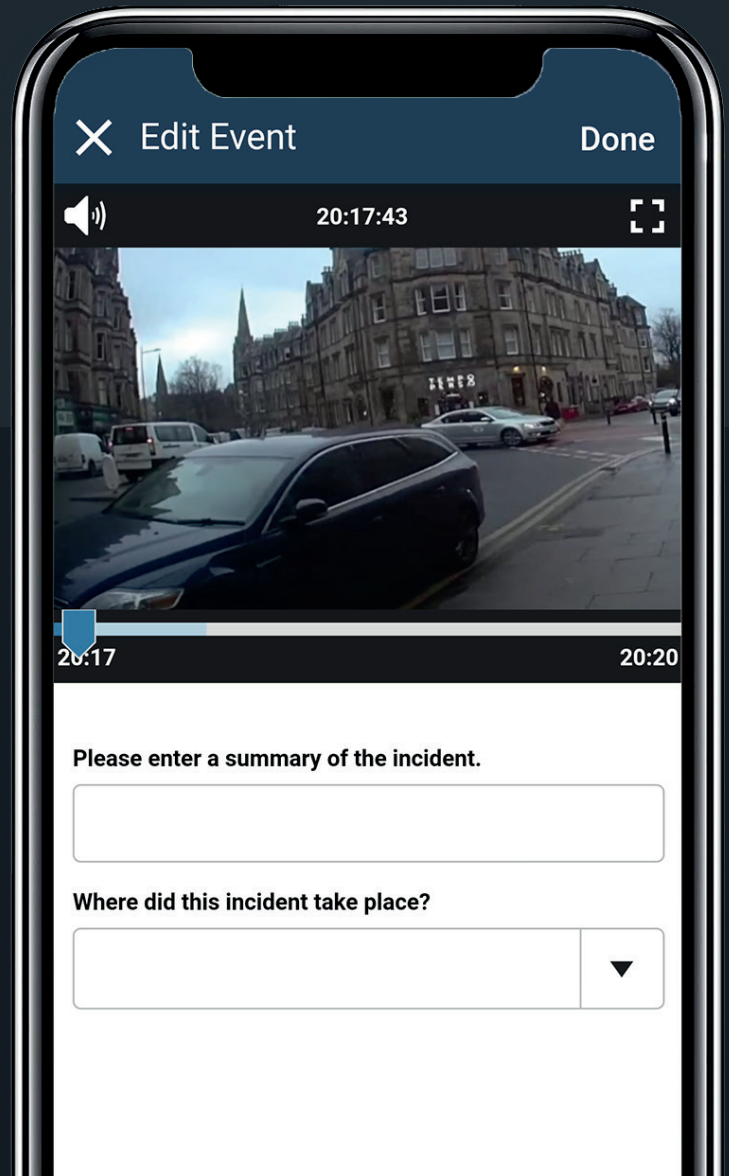

MAINTAIN EVIDENTIAL INTEGRITY

Ensure your footage has a strict chain of custody and is admissible in court with VB SmartControl's high standard of evidential security.

VB SmartControl uses the same security protocols as VideoManager, including end-to-end SSL encryption, to keep your footage safe. Videos cannot be deleted or shared from the app, and are not stored on the app itself - as soon as your VB400 has been docked and connected to VideoManager, all video and associated metadata will be offloaded from the camera automatically.

SEE CRUCIAL DEVICE INFORMATION AT A GLANCE

Keep your shift running smoothly. Receive updates about your VB400's battery life and recording capacity in real time, and watch the live viewfinder to ensure the camera is mounted correctly on your uniform.

VB SmartControl gives you detailed insights about your VB400, so you'll never be caught off-guard. With live battery and memory information, and the ability to see what your VB400 sees, you can be safe in the knowledge that your VB400 will capture crucial evidence when it matters most.
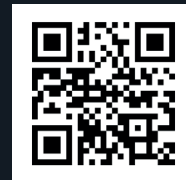

HARDWARE REQUIREMENTS

ANDROID VERSION	6.0+ ARM or x86-64 (32-bit not supported)
IOS VERSION	12+
VIDEOMANAGER VERSION	16.0+
