

Rave Panic Button

Expedite urgent communications

Rapidly communicate any type of emergency with the push of a button, simultaneously connecting to on-site personnel, first responders and those involved to keep everyone informed and engaged throughout a situation.

When one of the five emergency buttons is pressed, your phone will dial 9-1-1 – or a designated contact number – and share your location, emergency type, and facility information with both first responders and internal stakeholders. Responding teams receive a map-based common operating picture of the situation with real-time status updates, so they can respond faster and with more information.

→ One-push activation

Notify 9-1-1 and key staff that you need help with the push of a single button, minimizing response time and improving outcomes.

→ Improve incident response

Provide important details for each panic button activation on your property for both internal stakeholders and 9-1-1.

→ Integrate with your systems

Activate and broadcast to additional channels like digital signage, video systems, access controls, websites, sirens and IoT-ready devices.

Key features

Respond faster

Indicate an emergency in an average of 1.5 seconds. The app also includes a customized content directory that gives users quick access to important information like procedures, facility maps, and protocols.

Staff assist

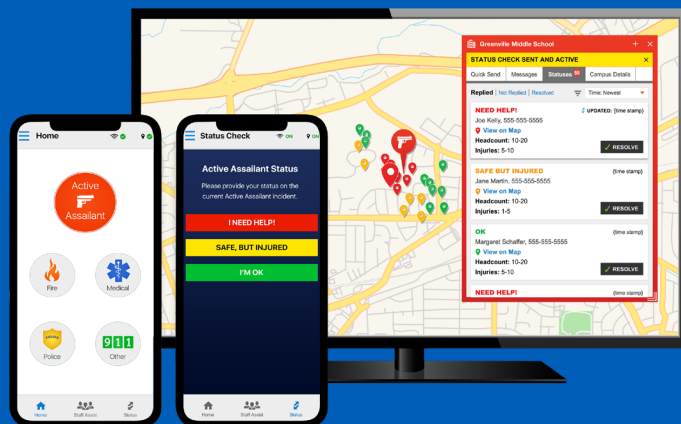

Enable authorized employees to communicate with on-site groups or individuals, such as a school nurse, without calling 9-1-1. This provides opportunities to use the app more often, building comfort and familiarity and helping resolve smaller, day-to-day emergencies.

Send status checks

During an unfolding emergency, help your administrators or first responders understand the status of the individuals involved. Status check responses can help coordinate and prioritize response efforts with actionable data like location, injuries, and requests for assistance.

Improve compliance

Conduct drills to prepare for emergencies and manage compliance with reporting by facility, date range, and drill type. Provide visibility to activation history for reporting and auditing.

Maximize your reach

Rave Panic Button makes it easy to call for help during an emergency. Open real-time communication among onsite personnel and first responders and help ensure key stakeholders are aware and informed.

Enhance emergency preparedness and response, interconnect public, private and 9-1-1 response teams, and provide timely and targeted communications with the full Rave Mobile Safety suite.
