Situational Awareness

Use case

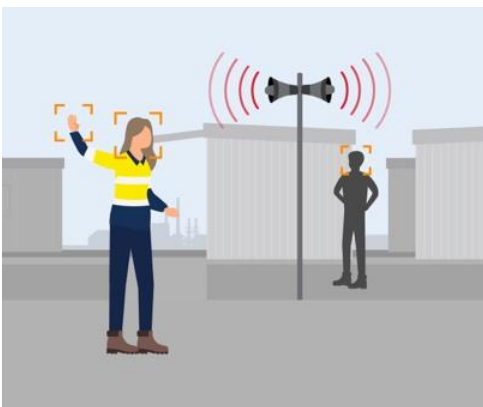

Monitor

Enhanced visibility

Integrated technology, including CCTV with motion sensors, body-worn cameras, AI sensing and radio with duress functionality provide enhanced visibility across sites to detect incidents when workers are walking between facilities.

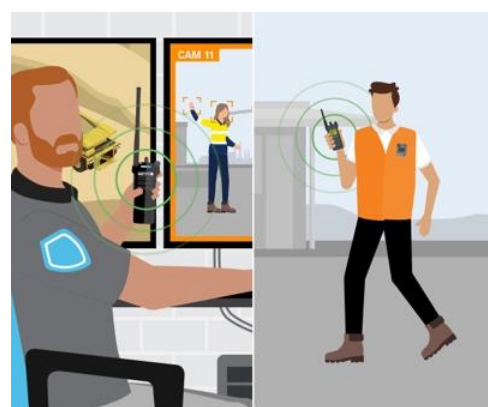

Connect

Integrated communications

Communication on and off site is maintained between the safety remote operation centre (SROC) and onsite security. Integrated video, analytics, cloud software and radio enable efficient and effective response.

Respond

Immediate intelligent response

When an alert is detected by AI, such as emergency hand gesture or voice command, software initiates an immediate, intelligent response and triggers an automatic voice warning to anyone in the vicinity.

Manage

Threat mitigated

SROC consolidates information from onsite video, voice and data into a single view to provide enhanced visibility and real-time situational intelligence for multiple sites.
